EDUCATION

Software Engineering Co-op

McMaster University - 3.8/4.0 GPA

Hamilton, ON

September 2023 - Expected April 2028

Relevant Courses: Data Structures & Algorithms, Software Design & Requirements, Concurrent Systems, Databases

TECHNICAL EXPERIENCE

Fullstack Developer Intern

EllisDon - Construction Technology

May 2026 – Present

Toronto, ON

- Building a redesigned payment system in React and Java, integrating frontend with new REST APIs ahead of a Q4 2026 launch to 1000+ users
- Reduced deployment environments by 33% and resequenced the release pipeline, cutting infrastructure cost and shortening the path from PR to production
- Built multi-select support across a legacy Go backend and matching React frontend, letting clients update records directly instead of waiting on manual helpdesk edits
- Raised automated test coverage from 30% to 70% in production repositories, reducing regression bugs
- Instrumented CI pipelines to upload test coverage metrics for 14 repositories to a shared Datadog dashboard

Software Developer Intern

Dayforce

Jan 2026 – April 2026

Toronto, ON

- Extended a shared C# library and API endpoint across two microservices to support a new request payload type
- Triaged 15 Kodem security tickets, writing JavaScript fixes, patching dependencies, and flagging false positives
- Resolved 10+ production defects across C# and .NET microservices in an org-hierarchy management tool
- Enhanced admin interfaces with TypeScript and React, improving regex-based search and UI consistency
- Validated system behavior through Cypress E2E tests and SQL data verification in Dockerized environments

TECHNICAL SKILLS

Languages: Python, Java, Go, SQL, JavaScript, TypeScript, C#, Bash, HTML/CSS

Frameworks: React, .NET, Node.js, Spring Boot, JUnit, Cypress

Developer Tools: Git, PostgreSQL, Docker, Linux, GitHub Actions, MongoDB, Datadog, Jira, Maven

PROJECTS

Planly | FastAPI, Docker, React, Python, TypeScript, MongoDB, REST API

June 2025

- Developed a fullstack school planner by implementing a RESTful API design and NoSQL cloud storage
- Implemented task management with CRUD functionality, providing quick updates and grade predictions
- Dockerized React frontend and FastAPI backend, streamlining development and deployment

Smart Rescue Simulation | Java, JUnit 5, Apache, JSON, Maven, Git

March 2025

- Created an intelligent rescue drone in Java, navigating simulations efficiently with smart path finding
- Designed adaptive algorithms to dynamically parse inputs and output critical metrics in the JSON format
- Utilized OOP for reusable components, automating a CI/CD pipeline with JUnit and GitHub Actions

Stud.AI | React, Tailwind, Git, Google Cloud, Cohere, Node.js, HTML/CSS

January 2024

- Collaborated in a team using Git to build a study helper powered by the Cohere LLM API
- Leveraged React.js and Tailwind to build responsive front-end UI for improved user interaction
- Integrated MongoDB on GCP for scalable data storage, enabling data updates with sub 200ms latency

Spotify Playlist Generator | Python, Git, Fetch API

November 2023

- Won first place at RoboHacks 2 Hackathon for innovative web design and Spotify integration
- Developed Python app using Spotify API to dynamically generate user-tailored playlists in under 10 seconds
- Implemented simultaneous playlist updates based on user listening patterns
